

# Step up to a higher standard of imaging

**FOR YOUR PATIENTS, YOUR CLINICIANS, AND YOUR BOTTOM LINE.**

More than 90 years of innovation in medical imaging have driven a relentless pursuit of better outcomes and smarter care delivery.

From radiography, ultrasound, and healthcare IT to endoscopy, pharmaceuticals, and regenerative medicine, our continually expanding portfolio reflects a deep and ongoing commitment to advancing clinical care through cutting-edge solutions.

Fujifilm is trusted worldwide for delivering ultra-low-dose diagnostic imaging made possible by exclusive high-sensitivity capture and advanced processing technologies. Our systems are engineered for reliability, designed to keep pace with the most demanding caseloads and backed by expert training and service to ensure your clinical teams get the most from every solution.

## About Fujifilm Healthcare Americas

At Fujifilm, we meet your real needs with real solutions. We help you deliver better outcomes – financial, operational, and clinical – through exceptional image quality, increased patient safety, enhanced workflow, and improved return on investment.

**This is true “value from innovation” – and what we offer every day.**

Delivering more than technology.  
Delivering integrated solutions.

# Fujifilm Portfolio Highlights

## Computed Tomography

**Scenaria View & Focus Edition** — 80cm, 128 slice, lateral shift table, cardiac, interventional, dual energy and focus engine Cardio Still Shot motion correction.

**FCT iStream** — 75cm, 128 slice, fast 500msec rotation, 60kW, SynergyDrive fast workflow for Radiology and busy EDs.

**Supria Plus** — 75cm, 32 and 128 slice, low dose lung screening, calcium scoring and interventional, great for smaller spaces and outpatient settings.

## Magnetic Resonance Imaging

**Velocity** — A true open design 1.2T that performs like a 1.5, providing unique patient comfort, reduced scan times and exceptional image quality to differentiate your imaging services.

**Synergy** — 1.5T MRI in an affordable, streamlined package, ultra-fast exams, and AI Deep Learning Reconstruction. Enhanced workflow and increased throughput, 50% scan time reduction vs previous generation.

**Aperto** — A 0.4T permanent magnet, space- and TCO-saving true open design. Advanced noise reduction, fast scan times and innovative high sensitivity coils.

## Digital Radiography

### PORTABLES

**FDR Go iQ** — One of the smallest, quietest, smoothest, most agile and dependable full-size portables available. Retractable column, live positioning 3D camera, touch tube display, in bin charging, system inching, antibacterial glassfree detectors and more.

**FDR AQRO** — Innovative, cost-effective mini portable, perfect for in department dedicated uses, ICU, NICU, ER, infectious diseases and remote applications.

### DETECTORS

**FDR D-EVO III** — Glass-free detectors, significantly lighter and more durable with amazing dose performance.

**FDR D-EVO III G80i** — Ultra-lightweight (just 12 lbs.), wireless 17x32" long length detector. Portability for intra operative spine and leg surgeries, as well as upright and supine long length exams.

### RADIOGRAPHIC ROOMS

**FDR Visionary Suite** — Our flagship system offering fully automated positioning, long length imaging, dual energy subtraction, body tomosynthesis advanced applications.

**D-EVO Suite FSx and OTCx** — Latest advanced features in a room built to perform and withstand the rigors of busy hospital and outpatient environments.

**Persona RF PREMIUM** — General x-ray system with remote fluoroscopy capabilities. A solid, heavy duty and streamlined design for limited spaces.

## SURGERY SUITE

**FDR Cross** — Unique lightweight, battery- powered, compact two-in-one fluoroscopy and portable x-ray.

**Persona CS** — All-in-one c-arm designed for orthopedic and pain management, providing full featured versatility in tight spaces.

**Persona C** — 20 kW, optimized for surgery suite, separate dedicated surgeon's and operator consoles. Both C and CS systems are lightweight, feature spacious 82cm openings and available in two detector sizes (20 or 30cm) for optimal image quality and ultra-low dose fluoroscopy and vascular imaging.

**Persona C-HR** — Steps up to 25kW power, 4k 32" high resolution surgeon's monitor, 30 FPS, special IGZO high sensitivity detector, active cooling (50% cooler). Roadmapping, Digital Subtraction, Angiography (DSA) and Radiography.

## Mammography

**ASPIRE Cristalle** with 3D Digital Breast Imaging — Intelligent design featuring patented Comfort Paddles and advanced capture and processing technologies. Ensures fast, comfortable exams for patients, easy workflow for technologists and confident readings for radiologists across all breast densities.

## Ultrasound for Guidance and Diagnostics

Powerful ultrasound platforms and probes with exceptional image quality and reliability. Systems provide cutting-edge technologies optimized for guidance and diagnostics for women's health, cardiology, radiology, surgery, and more to ensure outstanding patient care.

## Synapse 3D & Enterprise Imaging

Industry leading functionality and optimization for most every specialty. Powerful server-based architecture for fast, secure access to imaging data-sets. Provides accurate 3D visualization and analysis of complex anatomy to aid diagnosis and treatment planning.

## Endoscopy

Industry leading functionality and optimization for most every specialty. Powerful server-based architecture for fast, secure access to imaging data-sets. Provides accurate 3D visualization and analysis of complex anatomy to aid diagnosis and treatment planning.
